Abdelrhman Kamal

Front-End Developer (React js)

I am front end developer who change her career a lot times before i start in front end field i was a game developer and i work on game that made physics easy to learn and i work on voice assistant it connect with youtube when you say open (video name) it will open as audio. why? because i made it if you are play game or work and you don't wanna to see a youtube video you can just hear it. and i start with project i was a big one but it's very difficult to me to finish it

PROJECTS

XO game

XO game but with different game mechanisme

i made a xo game but i use anther method in this game because i didn't use a minmax algo but i made a bot (x) that play against another bot (o) and every time bot (O) win a website will save the bot o movements to win and if it lose a website will save bot x movements to be able to defined a bot x technique and after 2 hours bot o start to win all games vs bot x and i take all bot o movements and strategy and put it on game so every time you will play this game if bot o win doesn't save his movements but every time you will win bot o will save your movements and found the best solution to block it next game

React Todo

Todo App (Drag & Drop)

this project it was one of the best projects a have work on it. It has a big challenge for me because when i start to search for node package to help me in Drag & Drop feature i found React beautiful dnd but it doesn't work for me so i decided to use React DnD and when i start to use it i found a problem with package React DnD doesn't save any thing you made if you rearrangement you list react dnd will not save it so i work for 6 hours to fix it and after a lot of tries i found the solution and i fix this problem
